

Infrastructure

- Dissolution tester equipped with fraction collector and UV-Vis spectrophotometer (Jasco).
- Thermal analysis instruments (Temperature Modulated DSC),
- Home-made apparatuses for kinetic release measurements
- Vacuum apparatuses for sorption and longitudinal dilation kinetic measurements on polymer samples including electronic microbalances (Cahn 2000 and MK2-M5 CI Electronics) or quartz spring balances
- Polarizing and interferometric microscopes
- Tensile tester in conjunction with optical setup
- Abbe refractometer.
